How accurate were Good Judgment forecasters?

What words did they use frequently in comments?

What websites did GJ forecasters cite most often?

What sentiment did they express in updating forecasts?

Good Judgment Open users have the ability to input a "comment" along with their forecasts. A comment may serve as a place for reflection, where forecasters can lay out the rationale for their current estimate. We've combed through the 18,967 comments submitted on *The Monkey Cage's* 2016 election questions, looking for commonly cited one-word and two-word phrases. Here are the results:

## Select a Question Type

- ☒ All
- ☐ General Presidential Election

## Phrase Length

- ☒ 1 word
- ☐ 2 word

which **one-word phrases** did forecasters use most often in comments?

# A Review of the 2016 Election, using Good Judgment Forecasting Data

How accurate were Good Judgment forecasters?

What words did they use frequently in comments?

What websites did GJ forecasters cite most often?

What sentiment did they express in updating foreca..

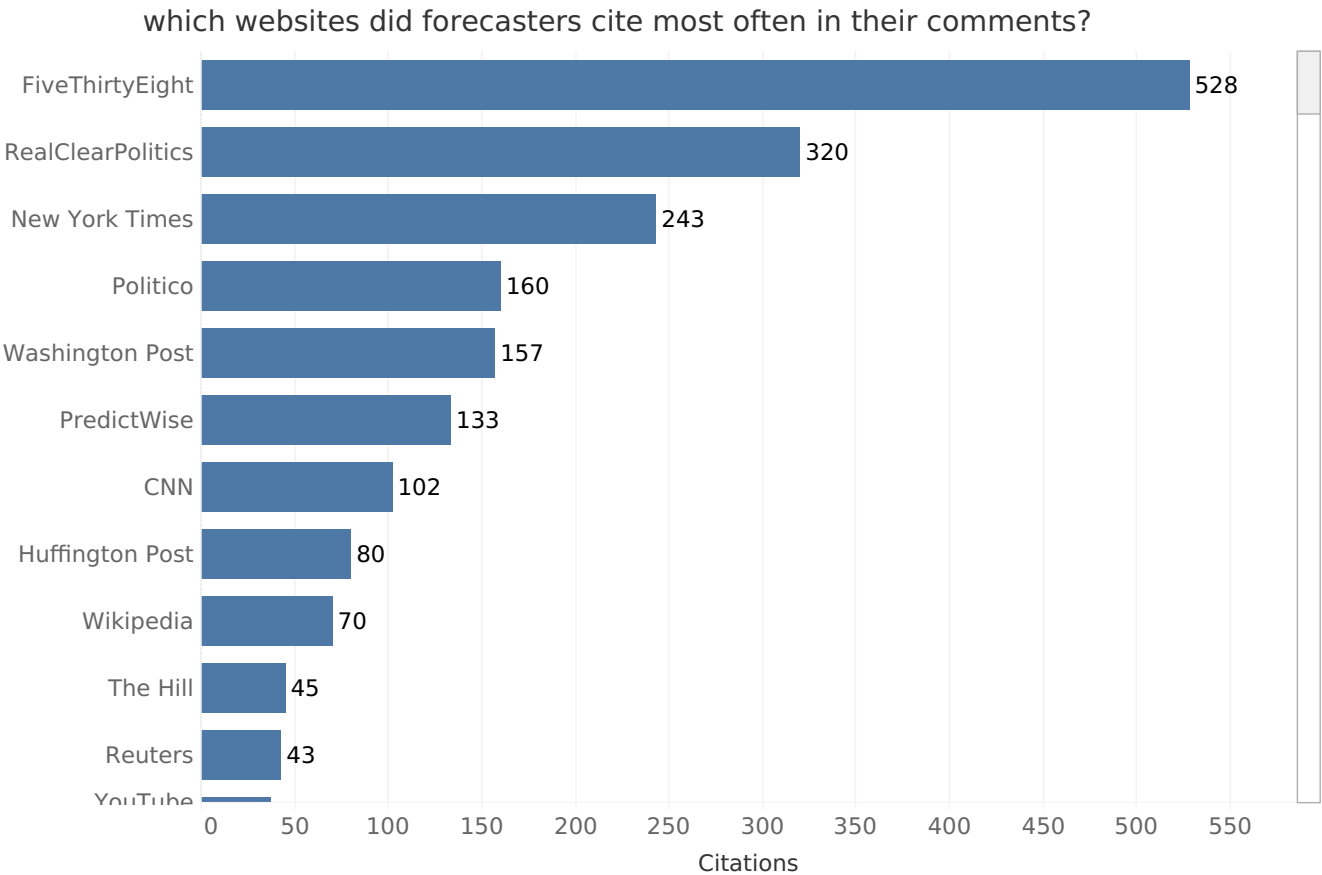

In roughly 5.6% of comments, forecasters linked to another website. These links often served as references to articles that supported their current position on a given question. By analyzing the websites that appeared in comments, we can get a sense of the sources of information that influenced GJ users this election season.

# A Review of the 2016 Election, using Good Judgment Forecasting Data

How accurate were Good Judgment forecasters?

What words did they use frequently in comments?

What websites did GJ forecasters cite most often?

What sentiment did they express in updating foreca..

We took the comments that GJ users inputted with their forecasts and ran them through a sentiment analyzer. The analyzer assigned a score to each comment from -1 (most negative) to +1 (most positive), depending on the proportion of words that carried a positive connotation. First, we looked at how the sentiment in forecasts on *The Monkey Cage's* questions varied over time. It seems that GJ forecasters became more bitter as the campaign wore on.

sentiment in comments declined over the course of the campaign

We then looked at how positively users reacted *on average* when they increased or decreased the probability of an outcome on a given question. Were they happier, say, when raising the probability that "A Democrat" will win the White House?

## Question

Who will win the 2016 US presidential election?

how positively did forecasters react when they changed the probability of an outcome?
