### Notes:

2005-2018 enrollments are fall FTE from IPEDS institutional data; publicly controlled institutions in degree-granting institution categories "primarily associate" or "associate and certificate"

1991-2004 enrollments are from the Digest of Education Statistics Fall FTE Enrollment for 2-Year Public Institutions

This is a modest change to account for increasing numbers of community colleges offering bachelor's degrees and thus no longer technically being "2-year" colleges, though still in the "primarily associate" category.

2019-2020 enrollment change numbers are from the National Student Clearinghouse's (NSC) November 2020 update on national and state enrollment trends as of October 22, 2020.

NSC coverage is not complete for all states and is based on headcount rather than FTE enrollment.

Headcounts change more quickly than FTE since part-time headcounts are more volatile than full-time headcounts, so this may differ from FTE data when available.

NSC headcounts are much more timely than IPEDS, however, and will likely show the same general trend as the final data.

For Indiana, the 2019 change number is calculated from Indiana Commission on Higher Education Data and 2020 enrollment change is based on Ivy Tech's enrollments as reported in Inside Higher Education.

All unemployment data are from the Bureau of Labor Statistics
